SUMMARY

Platform / DevOps Engineer with 5+ years building self-service, secure, and observable EKS platforms on AWS across fintech and healthcare. Strong across Terraform, GitOps, zero-trust access, and reliability engineering. Implemented 3 production AI workflows (Claude Code, MCP) for secrets provisioning, Kubernetes triage, and documentation — taking routine toil off engineering teams.

PROFESSIONAL EXPERIENCE

Platform Engineer | Tempus

Chicago, IL (Remote) · Sep 2023 – Present

- Operated multi-account AWS EKS clusters with ArgoCD and GitHub Actions for 20+ microservices, giving 40+ engineers a self-service path to deploy by merging a PR.
- Built an AI secrets-provisioning workflow (Claude Code) with the Security team that generates scoped IRSA policies and Secrets Store CSI manifests — letting teams self-serve secrets in minutes, with no secret material in Git.
- Led an EKS migration to IPv6-only clusters to remove IPv4 address limits, using a DNS64/NAT64 path to keep IPv4-only registries and GitHub working with zero application changes.
- Deployed the Kubernetes Gateway API on EKS to separate network management from app routing, letting developers safely update their own routes.
- Architected a Strimzi Kafka ingestion pipeline on EKS for cold-chain vaccine telemetry, partitioned across brokers for scale — load-tested to 2M+ daily events with no message loss observed.
- Replaced static CPU/memory alerts with Datadog APM, Prometheus, and Grafana SLO dashboards, paging only on real latency and error issues — cutting alert noise from ~35 to ~4 actionable pages a week.
- Built AI workflows for Kubernetes triage and documentation search, cutting repeat questions to the platform team — Claude Code skills that summarize failing pods and a Confluence MCP integration serving runbooks from the terminal.

DevOps Engineer | Braintree

Chicago, IL (On-Site) · Sep 2022 – Jul 2023

Junior Cloud Engineer

Mar 2021 – Sep 2022

- Deployed Kubecost with Slack reports showing each team's spend, cutting non-production compute spend 30% over two quarters.
- Replaced static SSH keys and legacy VPNs with zero-trust access via Teleport across AWS and EKS, removing always-on production access and capturing full command audit logs, with an emergency access fallback.
- Automated daily EKS snapshots with Velero to cross-region S3, tested quarterly for under-15-minute production recovery.
- Replaced ad-hoc Python/Bash provisioning with Terraform and FluxCD, adding nightly drift detection so manual changes surfaced as alerts instead of outages.
- Configured GitLab CI pipelines with auto-scaling Kubernetes runners on AWS, giving developers self-service test and build workflows on every pull request.

TECHNICAL SKILLS

Container & Orchestration: Kubernetes (EKS), Helm, Strimzi Operator, Secrets Store CSI driver, Velero

Cloud & Infrastructure (AWS): Multi-Account Organizations, IAM / IRSA, Secrets Manager

Infrastructure as Code, CI/CD & Delivery: Terraform, GitOps, ArgoCD, FluxCD, GitHub Actions, GitLab CI, Bash, Python

Networking & Security: Kubernetes Gateway API, IPv6-only Clusters, DNS64/NAT64, Teleport, SSO / Short-Lived Certificates, Zero Trust

Observability & Incident Response: Datadog APM, Prometheus, Grafana, Kubecost, Incident Response

Data Infrastructure: Kafka, PostgreSQL

AI & Platform Automation: Claude Code, Model Context Protocol (MCP), Custom Agent Skills

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) · Certified Kubernetes Application Developer (CKAD) · HashiCorp Certified: Terraform Associate · AWS Certified Solutions Architect – Associate

EDUCATION

Certificate in Full Stack Web Development — Northwestern University, School of Professional Studies

2018

B.A. in Finance — Ivan Franko National University of Lviv, Ukraine

2013
