SUMMARY

Platform / DevOps Engineer with 5+ years building self-service, observable, and cost-efficient platforms on AWS across fintech and healthcare. Deep experience with Terraform, Helm, ArgoCD, GitOps delivery, zero-trust security, and production observability. Brings AI-assisted workflows (Claude Code skills and MCP tooling) that cut operational overhead and help teams ship faster.

PROFESSIONAL EXPERIENCE

Platform Engineer | Tempus

Chicago, IL (Remote) · Sep 2023 – Present

- Operated multi-account AWS EKS clusters with ArgoCD and GitHub Actions for 20+ microservices, giving 70+ engineers a self-service path to deploy by merging a PR.
- Built an AI secrets-provisioning skill (Claude Code) with Security that auto-generates least-privilege IRSA policies and Secrets Store CSI manifests — enabling teams to self-serve secrets in ~3 minutes while ensuring zero sensitive data in Git.
- Led an EKS migration to IPv6-only clusters to remove IPv4 address limits, using a DNS64/NAT64 path to keep IPv4-only registries and GitHub working with zero application changes.
- Architected a Strimzi Kafka ingestion pipeline on EKS for cold-chain vaccine telemetry, partitioned across brokers for scale — load-tested to 2M+ daily events with zero message loss.
- Replaced static CPU/memory alerts with Datadog APM, Prometheus, and Grafana SLO dashboards across 20+ services, paging only on real latency and error issues — cutting on-call from ~35 to ~4 pages a week.
- Built AI into the platform workflow — Claude Code for Kubernetes triage, Copilot for Terraform, Confluence MCP for docs — so routine work stopped eating engineering time.

DevOps Engineer | Braintree

Chicago, IL (On-Site) · Sep 2022 – Jul 2023

Junior Cloud Engineer

Mar 2021 – Sep 2022

- Instrumented cost visibility with Kubecost, surfacing each team's spend in Slack so they right-sized their own Helm resource requests — cutting non-production compute spend 30% over two quarters.
- Automated daily EKS snapshots with Velero to cross-region S3, tested quarterly for under-15-minute production recovery.
- Managed primary on-call for core payment services, running postmortems that fixed recurring database crashes and cut weekly pages nearly in half.
- Replaced static SSH keys and legacy VPNs with Teleport Cloud across AWS and EKS, removing always-on production access and capturing full command audit logs, with an emergency access fallback.
- Refactored ad-hoc Python/Bash provisioning into Terraform and FluxCD, with nightly drift checks that caught manual changes before they hit production.

TECHNICAL SKILLS

Container & Orchestration: Kubernetes (EKS), Helm, Strimzi Operator, Secrets Store CSI driver, Velero

Cloud & Infrastructure (AWS): Multi-Account Organizations, IAM / IRSA, Secrets Manager

Infrastructure as Code, CI/CD & Delivery: Terraform, GitOps, ArgoCD, FluxCD, GitHub Actions, GitLab CI, Bash, Python

Networking & Security: IPv6-only Clusters, DNS64/NAT64, Teleport, SSO / Short-Lived Certificates, Zero Trust

Observability & Incident Response: Datadog APM, Prometheus, Grafana, Kubecost, Incident Response

Data Infrastructure: Kafka, PostgreSQL

AI & Platform Automation: Claude Code, Model Context Protocol (MCP), Custom Agent Skills

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) · Certified Kubernetes Application Developer (CKAD) · HashiCorp Certified: Terraform Associate · AWS Certified Solutions Architect – Associate

EDUCATION

Certificate in Full Stack Web Development — Northwestern University, School of Professional Studies

2018

B.A. in Finance — Ivan Franko National University of Lviv, Ukraine

2013
